Hiring Manager
BT Group
United Kingdom

Dear Hiring Manager,

I am writing to express my interest in the **Senior Network Engineer (Req ID: 55689)** position at BT Group. With over 12 years of experience in network engineering across telecom and enterprise environments, I bring strong hands-on expertise in routing, switching, transport networks, and multi-vendor infrastructure, along with a proven track record in troubleshooting and performance optimisation. :contentReference[oaicite:0]index=0

In my most recent role as a **Technical Lead at Ericsson**, I was responsible for designing, validating, and troubleshooting large-scale L2/L3 IP networks for carrier-grade deployments. I worked extensively with technologies such as BGP, OSPF, MPLS, VLANs, QoS, and EVPN/VXLAN, ensuring scalable and resilient network behaviour across complex environments. My role required deep protocol-level analysis, root cause investigation, and close collaboration with cross-functional teams to ensure stability and performance. :contentReference[oaicite:1]index=1

Prior to this, during my tenure as a **Technical Leader at Nokia**, I specialised in transport network performance and backhaul validation for LTE and 5G systems. I led performance testing initiatives, analysed C-plane and U-plane traffic, and identified system bottlenecks to improve throughput and reduce downtime. I also contributed to automation by developing Python-based solutions that reduced manual effort and accelerated testing cycles.

Across my career, I have gained hands-on experience with multi-vendor platforms including Cisco, Juniper, Ericsson, and Nokia, and have worked with network testing and monitoring tools such as IXIA, Spirent, TRex, Wireshark, and NetFlow. I have also been involved in implementing VPNs (IPSec), supporting firewall configurations, and ensuring network compliance with security and operational standards.

I am particularly interested in this opportunity at BT Group due to its scale, impact on national infrastructure, and focus on building secure and resilient networks. I am eager to contribute my strong troubleshooting skills, practical engineering experience, and collaborative approach to support BT's network operations and ongoing transformation initiatives.

I am based in Reading, UK, have full right to work, and am available immediately. I am also comfortable participating in on-call rotations and working across BT's key locations including London and Bristol.

I would welcome the opportunity to discuss how my experience aligns with your requirements.

Thank you for your time and consideration.

Yours sincerely,

Akash Sachdeva
